

ESRI is offering the two day instructor-led training class, “Introduction to Geoprocessing Scripts Using Python”, September 25-26 in Hyannis, MA immediately following the 23rd Annual Northeast Arc Users Group Conference.

Introduction to Geoprocessing Scripts Using Python ([click for detailed outline](#))

- Understand the basics of the Python scripting language.
- Understand how scripts can be used in the ArcGIS geoprocessing framework.
- Incorporate tools and environment settings into scripts.
- Incorporate cursors, describe objects, and enumerations into scripts.
- Work with scripts in ArcToolbox.
- Access resources for debugging Python code

Date: Thursday and Friday, September 25-26, 2008

Time: 8:30am to 4:30 pm

Location: [Resort and Conference Center at Hyannis](#), 35 Scudder Ave, Hyannis, MA 02601.

This is the same hotel as the NEARC Conference. Please be sure to request the “ESRI Rate” when reserving your room.

Each student will receive a Lecture Book with printed class lecture slides, an Exercise Book with step-by-step exercise directions, and a Course Data CD with all exercise data required to perform course exercises. A Class Completion Certificate, signed by the ESRI Instructor, will also be provided to each student at the end of class.

*Note: This class is not listed on ESRI’s on-line course schedule. To register, please print out and complete the [registration form found on-line here](#). Fax the completed form, along with payment information, to the fax number on the registration form. Class space is limited to 12 students, so please register early to reserve your seat.

Standard commercial price is \$980 per student. State, County, and Local government employees as well as Educators and ESRI Business Partners may qualify for reduced pricing. Please contact the ESRI Boston Office with any questions regarding registration or pricing at training-bst@esri.com or 978-777-4543.
